

Forklift truck with operator seat ideal for horizontal and vertical load handling over long travel distances, offering all the advantages of a mobile base

The Modus BM ac forklift trucks with operator seat and servo-assisted steering wheel are ideal for horizontal and vertical load handling over long distances. The high-capacity battery ensures long battery life. High visibility mast with lift capacity between 1,560 mm and 5,310 mm. They are characterised by compact size, high manoeuvrability and are suitable for all sectors. The key feature of the Modus BM ac trucks is the spars lifting function that renders it suitable not only for transporting double pallets but also for use on irregular floors and slopes.

Frame

Made of bended sheet metal to minimise any tensions induced by welds, ensuring maximum stability and best mechanical resistance under any conditions of transport and storage. The configuration with four support points offers unique lateral stability. The battery compartment cover is hinged, facilitating battery top-up and daily and periodical maintenance operations. Particular attention was paid to simplify the access to mechanical parts so as to minimise the routine maintenance costs.

Masts

The OMG masts are made of cold bended profiles, ensuring high resistance to bending and twisting. The lift cylinders are installed outside of the mast profiles and the chains are protected to ensure perfect visibility and maxi-

mum safety for the operator. Available in simplex, duplex and triplex version with wide free lift. The mast comes with standard tilt function that facilitates load picking and storage operations.

Hydraulic functions

The 4kW powerful and silent lift motor with high torque ratio ensures high performance with low power consumption. The pumps are highly efficient and very quiet.

Drive

Powerful and reliable AC traction motor, capable of meeting even the most demanding requests in terms of performance, under any conditions.

Electronic system

The machine is fitted with AC control with energy recovery, that can be enabled by:

- releasing the accelerator pedal;
- reversing the running direction

From this control, the operator can manage all truck's functions and carry out unlimited adjustments for performance optimisation, adapting the machine to any application, while ensuring silent operation and low power consumption at the same time.

Comfort when picking and storing loads

The configuration with four support points provides optimal stability, ensuring maximum safety and comfort during load picking and storage. The lifting, lowering and shifting levers ensure precise and smooth load lifting and lowering. The hydraulic motor with fluid adjustment system reduces the noise, ensuring at the same time smooth and precise load lifting. Enhanced lifting and lowering speed for faster operations. Side cylinders fitted with silent blocks to prevent any kickbacks that might affect the stability of the load during forks lowering.

Operator's compartment

- comfortable adjustable seat;
- non-slip footrest;
- small steering wheel;
- low step height for easy access.

Operation ensured in any conditions

The self-levelling axle ensure maximum grip on all surfaces, even when the truck is loaded.
